The Future of Nursing 2020-2030 Aug 08 2020 The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve

their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. The *Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity* explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by *The Future of Nursing: Leading Change, Advancing Health* (2011) report.

The Future of Nursing Jul 31 2022 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

This does seem much more exciting and more importantly. 'real world'" Lucy Land, Senior Academic, Centre for Health and Social Care Research Faculty of Health Birmingham City University "Useful resource for our students dissertation which can be a literature review or a research proposal" Melanie Brooke-Read, Department of Health & Social Studies, University of Bedfordshire "Excellent text book which actually takes away the 'fear' of research within healthcare" Angela Cobbold, Institute of Health & Social Care, Anglia Ruskin University "The text is very comprehensive and I found chapter 7 on action research particularly useful in supporting a student I was supervising. On the Politics of Ignorance in Nursing and Health Care Mar 03 2020 Ignorance is mostly framed as a void, a gap to be filled with appropriate knowledge. In nursing and health care, concerns about ignorance fuel searches for knowledge expected to bring certainty to care provision, preventing risk, accidents, or mistakes. This unique volume turns the focus on ignorance as something productive in itself and works to understand how ignorance and its operations shape what we do and do not know. Focusing explicitly on nursing practice and its organization within contemporary health settings, Perron and Rudge draw on contemporary interdisciplinary debates to discuss social processes informed by ignorance, ignorance's temporal and spatial boundaries, and how ignorance defines what can be known by specific groups with differential access to power and social status. Using feminist, postcolonial and historical analyses, this book challenges dominant conceptualizations and discusses a range of "nonknowledges" in nursing and health work, including uncertainty, abjection, denial, deceit and taboo. It also explores the way dominant research and managerial practices perpetuate ignorance in healthcare organisations. In health contexts, productive forms of ignorance can help to future-proof understandings about the management of healthy/sick bodies and those caring for them. Linking these considerations to nurses' approaches to challenges in practice, this book helps to unpack the power situated in the use of ignorance and pays special attention to what is safe or unsafe to know, from both individual and organisational perspectives. *On the Politics of Ignorance in*

It will also be of interest to scholars involved in the interdisciplinary study of ignorance.
